

NEXUSGOODS PERFORMANCE DASHBOARD REPORT

1. Introduction

This project is based on the NexusGoods (ShopNest Store) e-commerce dataset. The aim of this project is to design a Power BI dashboard that helps to understand sales performance, delivery delays, customer ratings, payment methods, and sales trends.

The dashboard is created in a single page and includes KPI cards, charts, slicers, and drill-through pages. This report explains each task given in the project with the related visualization and findings.

2. Dashboard Overview

The dashboard shows overall business performance using:

- KPI cards for quick summary
- Charts for sales, delays, ratings, and trends
- Slicers for filtering by Year, State, and Delivery
- Drill-through pages for detailed analysis

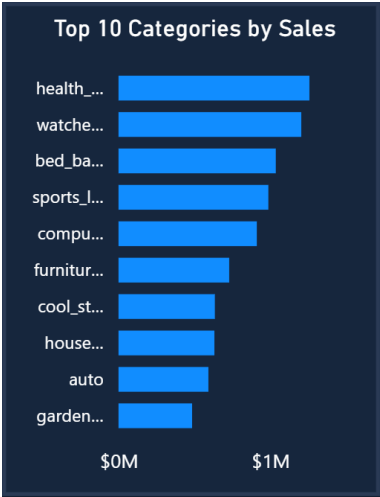

TASK-WISE ANALYSIS

Task 1: Top Categories by Total Price

Question Statement

Identify and visually represent the top 10 product categories by total sales.

Visualization

Explanation

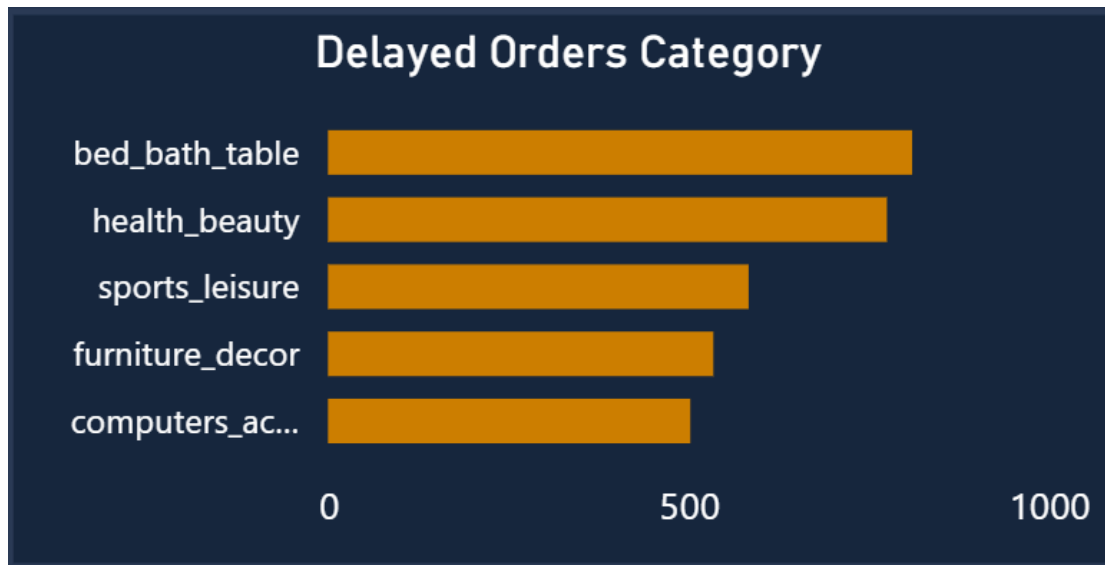

This chart shows the top 10 product categories based on total sales value. From this chart, we can clearly see which categories contribute the most to revenue. Categories like health_beauty, watches_gifts, and bed_bath_table are among the top selling categories. This helps the business to focus more on high performing categories.

Task 2: Delayed Orders Analysis

Question Statement

Determine the number of delayed orders in each category. An order is delayed if the actual delivery date is later than the estimated delivery date.

Visualization

Explanation

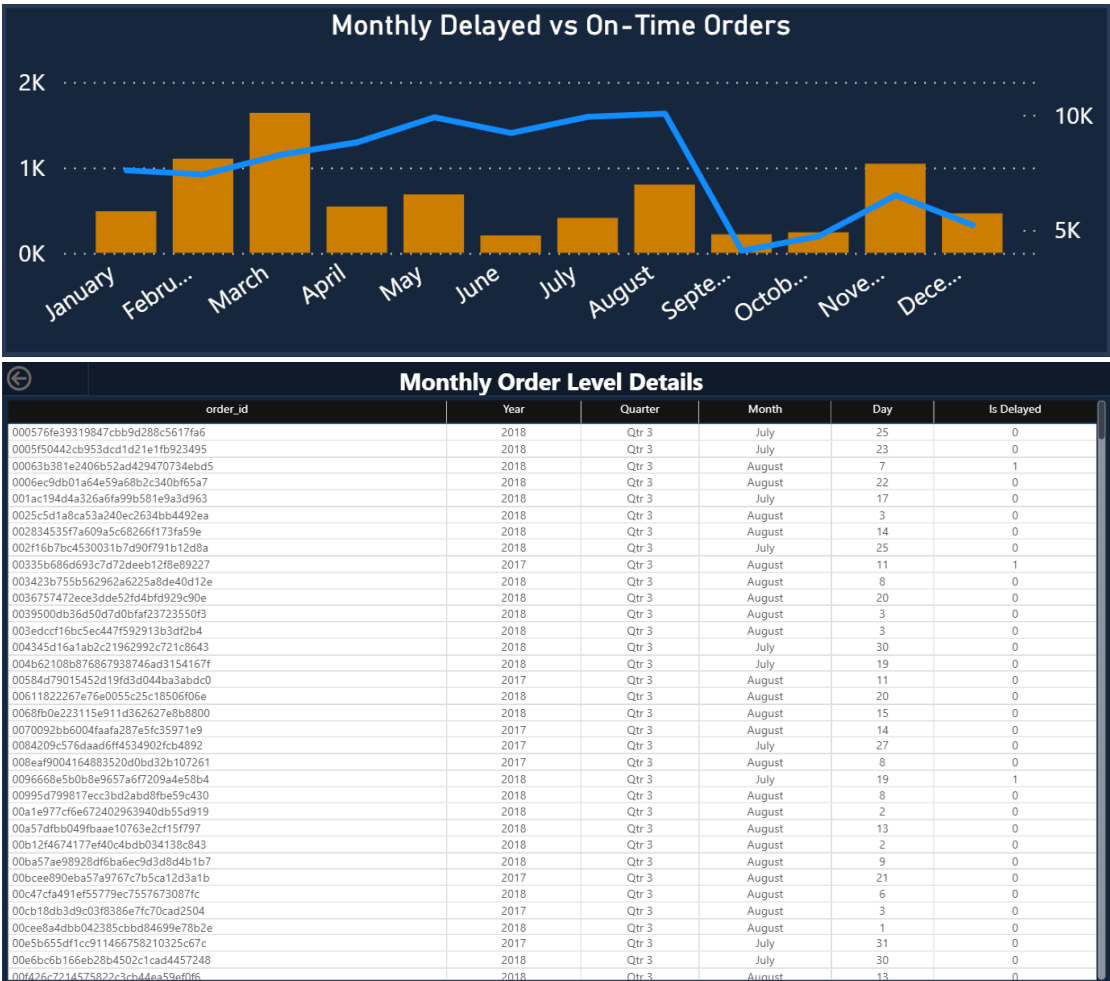

This chart shows how many delayed orders are there in each product category. Some categories like bed_bath_table and health_beauty have higher delays compared to others. This means these categories need better delivery planning. Only the top 5 delayed order categories are shown in the dashboard because the total number of categories is high. A drill-through page is provided to see full details.

Task 3: Monthly Comparison of Delayed and On-Time Orders

Question Statement

Compare the number of delayed orders and on-time orders for each month and provide a detailed view using drill-through.

Visualization

Explanation

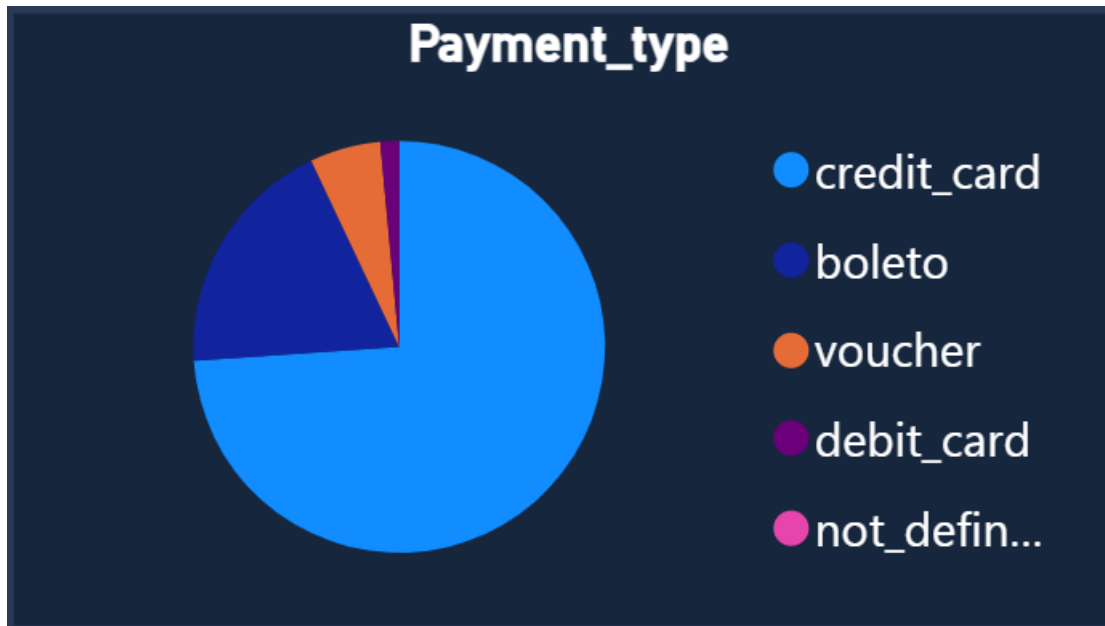

This chart compares delayed and on-time orders for every month. We can see that in some months delayed orders increase, especially towards the end of the year. The drill-through page helps to check the exact orders that were delayed. This is useful to understand delivery performance month by month.

Task 4: Payment Method Analysis

Question Statement

Analyze the most frequently used payment methods by customers.

Visualization

Explanation

This chart shows the distribution of payment methods used by customers. Most customers prefer to pay using credit card and boleto. Other methods like voucher and debit card are used less. This helps the company to understand customer payment preferences.

Task 5: Product Rating Analysis

Question Statement

Determine the top 10 highest-rated categories and the bottom 10 lowest-rated categories.

Visualization

Explanation

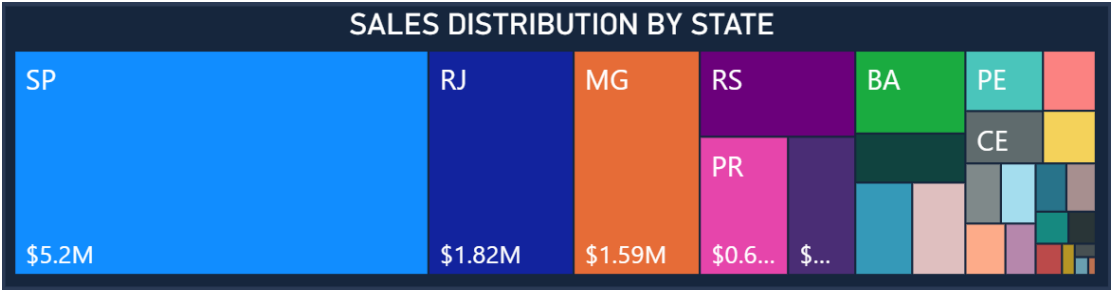

The first chart shows the categories with the highest average ratings, which means customers are very satisfied with these products. The second chart shows the categories with the lowest ratings, which may need quality improvement or better service. This helps the business to understand customer satisfaction level by category.

Task 6: State-wise Sales Analysis

Question Statement

Identify and visually represent states with high and low sales.

Visualization

Explanation

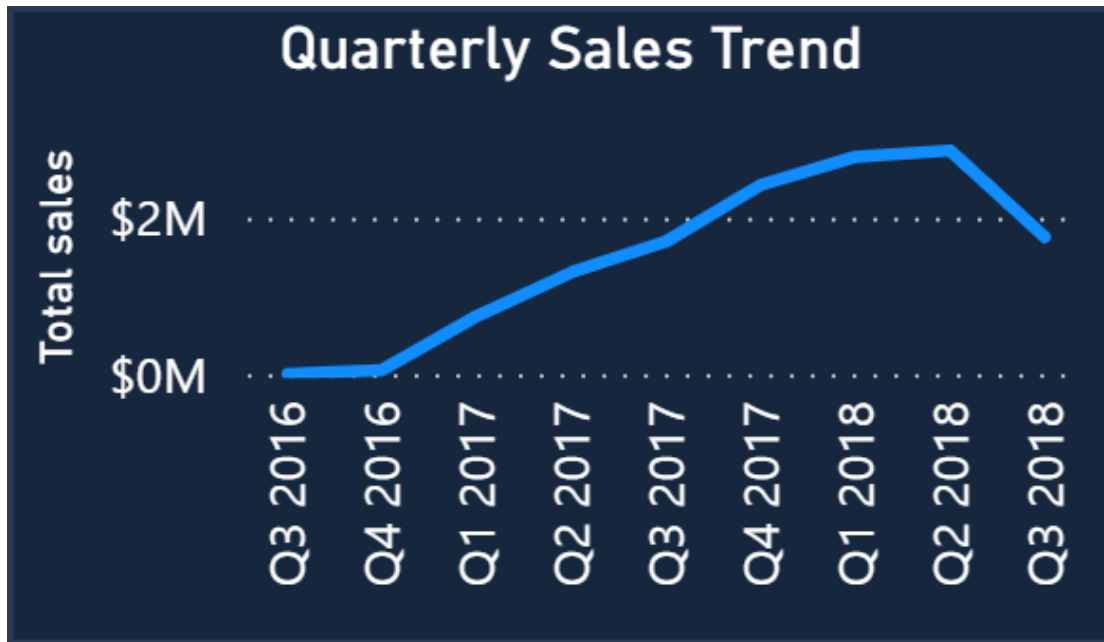

This chart shows how sales are distributed across different states. States like SP and RJ contribute more to total sales compared to others. This helps the business to understand which regions are performing well and which regions need more focus.

Task 7: Seasonal Sales Patterns (Quarterly)

Question Statement

Analyze and visualize quarterly sales trends to find seasonal patterns.

Visualization

Explanation

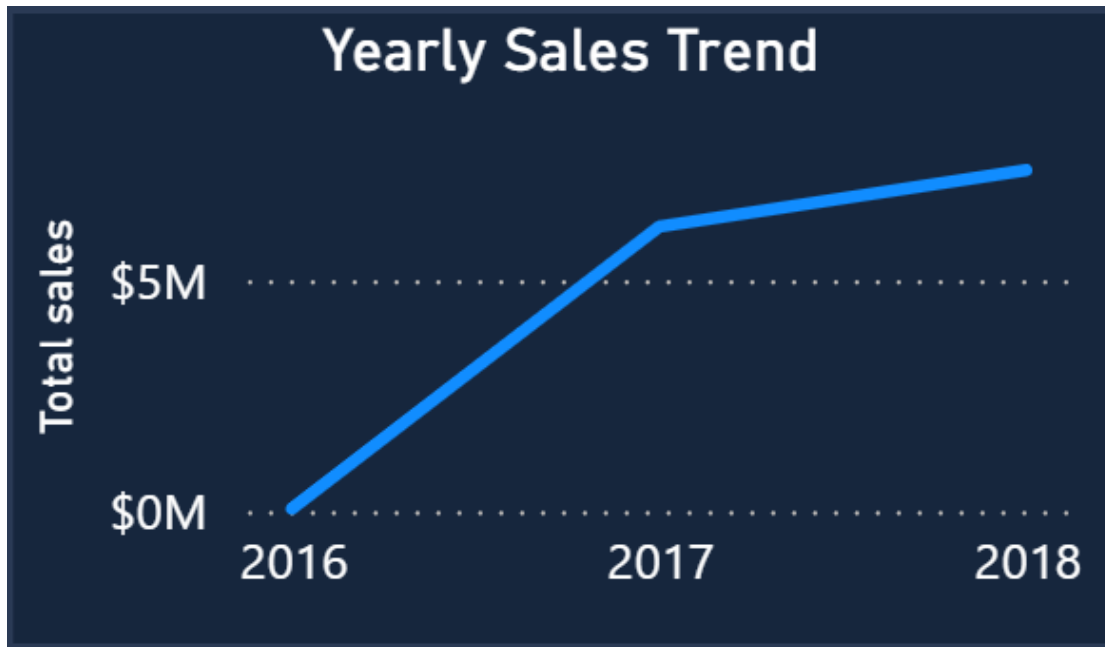

This chart shows how sales change across different quarters. We can see that sales increase over time and some quarters perform better than others. This helps to understand seasonal trends in the business.

Task 8: Revenue Analysis (Yearly)

Question Statement

Determine the total revenue and analyze how it changes over time on a yearly basis.

Visualization

Explanation

This chart shows total sales by year. We can see that revenue increases from 2016 to 2018. This shows that the business is growing over time and performing better each year.

3. KPI Cards Explanation

Question Statement

Show overall business performance using KPI indicators.

Visualization

Explanation

The KPI cards show Total Revenue, Total Orders, Average Review, and Average Delivery Delay. These give a quick summary of business performance. The revenue is \$13.59M, total orders are around 99K, average review is 4.07, and average delivery delay is 0.72 days.
